# 使用Git指令上傳已創建專案到GitHub

GitHub

先到官方網站下載Git

## Git - Downloading Package

Click here to download the latest ( 2.48.1) 64-bit version of Git for Windows. This is the most recent maintained...

[git-scm.com](https://git-scm.com)

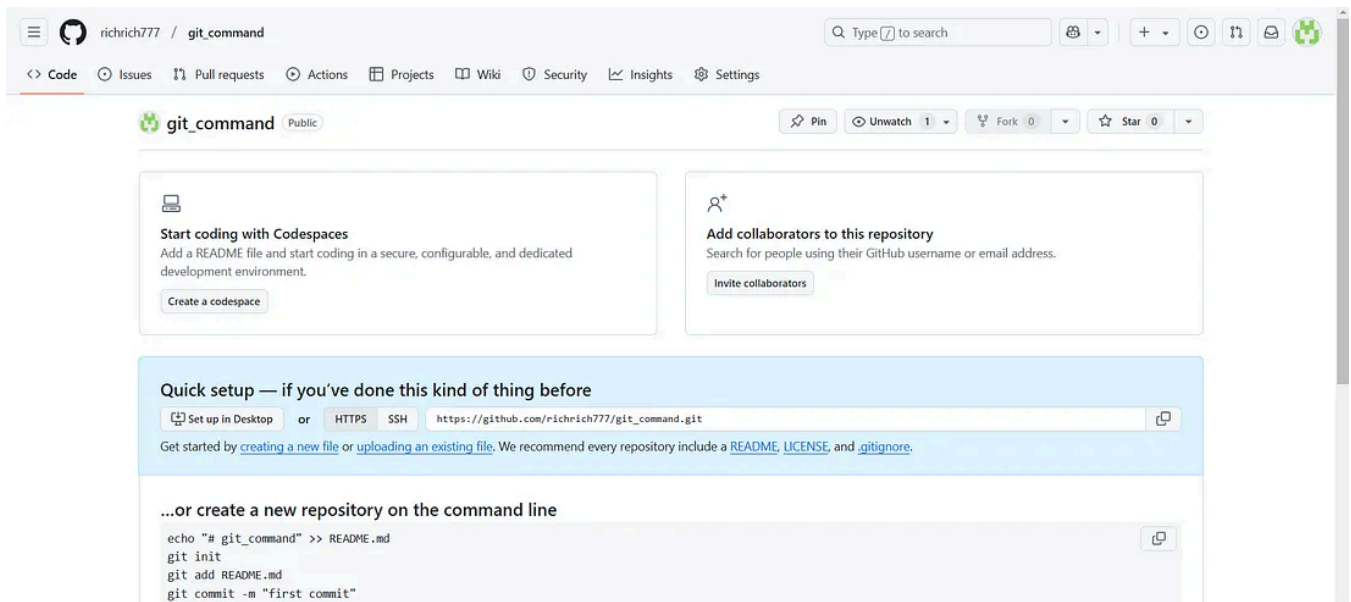

完成安裝後到終端機或是安裝好的Git Bash檢查git版本

```
$ git version  
git version 2.47.0.windows.2
```

確認後到自己的GitHub上創建一個Repository

創建完成後的畫面如下

之後再開啟終端機(也可以使用Git Bash)

以下使用Vscode做示範

先在Vscode開啟要上傳的專案，並在Vscode開啟終端機

輸入git init初始化空的git專案

輸入 `git status` 可以看到git專案目前還沒有任何東西

```
D:\桌面\React>git status
On branch master

No commits yet

Untracked files:
  (use "git add <file>..." to include in what will be committed)
    backend/
    frontend/

nothing added to commit but untracked files present (use "git add" to track)
D:\桌面\React>
```

接著輸入 `git add .` 把全部專案交給git管理  
再輸入 `git status` 查看git是否有成功管理

```
new file: frontend/public/vite.svg
new file: frontend/src/TodoList.css
new file: frontend/src/TodoList.tsx
new file: frontend/src/assets/react.svg
new file: frontend/src/index.css
new file: frontend/src/main.tsx
new file: frontend/src/vite-env.d.ts
new file: frontend/tsconfig.app.json
new file: frontend/tsconfig.json
new file: frontend/tsconfig.node.json
new file: frontend/vite.config.ts
new file: git
```

若在git add後遇到warning: LF will be replaced by CRLF可以參考這篇文章

### 遇到 **warning: LF will be replaced by CRLF in ...** 該怎麼解？

寫程式寫多了，都會自動忽略 warning 的警告，只要不是 error 就當沒事，但，直到遠端協作的時候，才發現事情大條了！😓

[noelhsiao.medium.com](https://noelhsiao.medium.com)

之後輸入`git commit -m "Initial commit"` 做初始化專案的commit  
再輸入`git branch -M main` 把主分支的預設名稱master名稱改為main

之後就能輸入指令上傳到你的GitHub

```
git remote add origin https://github.com/你的帳號/你的儲存庫.git
```

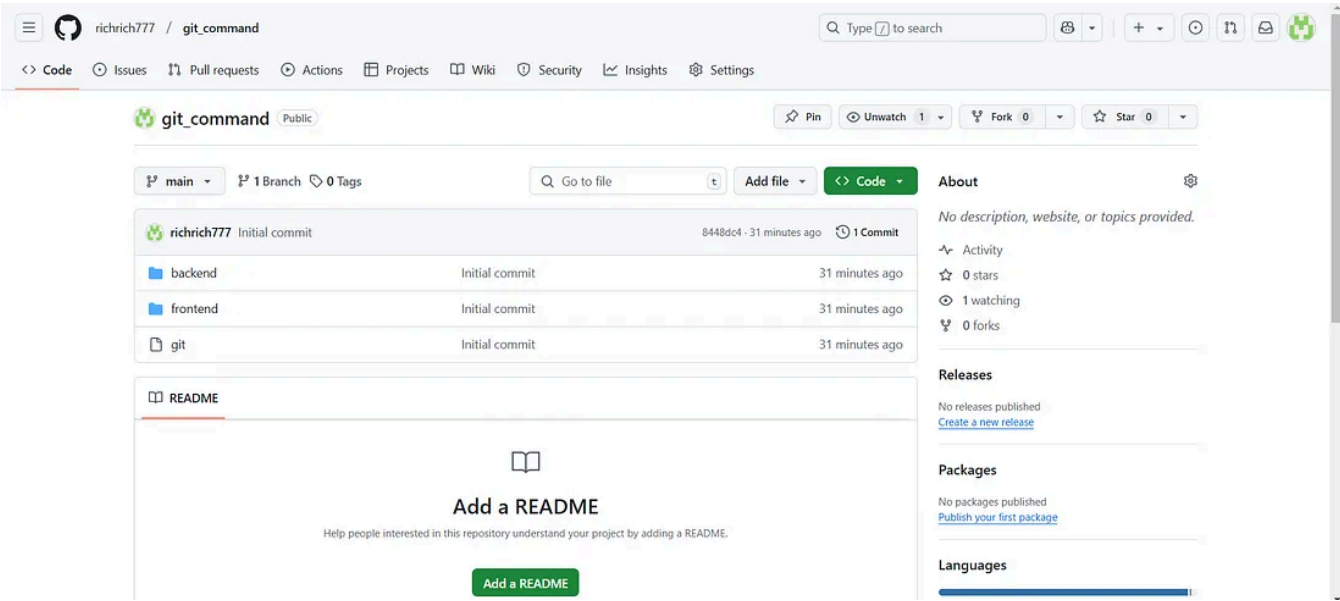

像我的是

```
git remote add origin https://github.com/richrich777/git_command.git
```

接著再輸入

```
git push -u origin main
```

完成上述步驟後就能看到專案已成功上傳到GitHub了
